**Example of Other** [Create Project »](#)

**Instructions**

Enter instructions for your HIT. It is a good idea to:

- Be as specific as possible in your instructions to eliminate ambiguity. For example, when asking workers to extract texts from an image, ask workers to type the texts exactly as shown in the image including capitalization, spaces and punctuations.
- Include an example of a right answer and a wrong answer. Highlight important information where appropriate.
- Clarify what you expect if a HIT is not doable because of missing data or other problems.

**1. This is an example of a multiple choice question. Select only ONE of the following:**

☐ Apple

☐ Orange

**2. This is another example of a multiple choice question. Select only ONE of the following. A drop down list saves more screen real estate than radio buttons but may require more keystrokes for the Worker to select the answer.**

- select one -

Now click on create object

**New Project** New Batch with an Existing Project

## Edit Project

Specify the properties that are common for all of the HITs created using this project.

**1 Enter Properties** **2 Design Layout** **3 Preview and Finish**

**Project Name:** Other This name is not displayed to Workers.

**Describe your HIT to Workers**

**Title** Your title here

Describe the task to Workers. Be as specific as possible, e.g. "answer a survey about movies", instead of "short survey", so Workers know what to expect.

**Description** Your description here

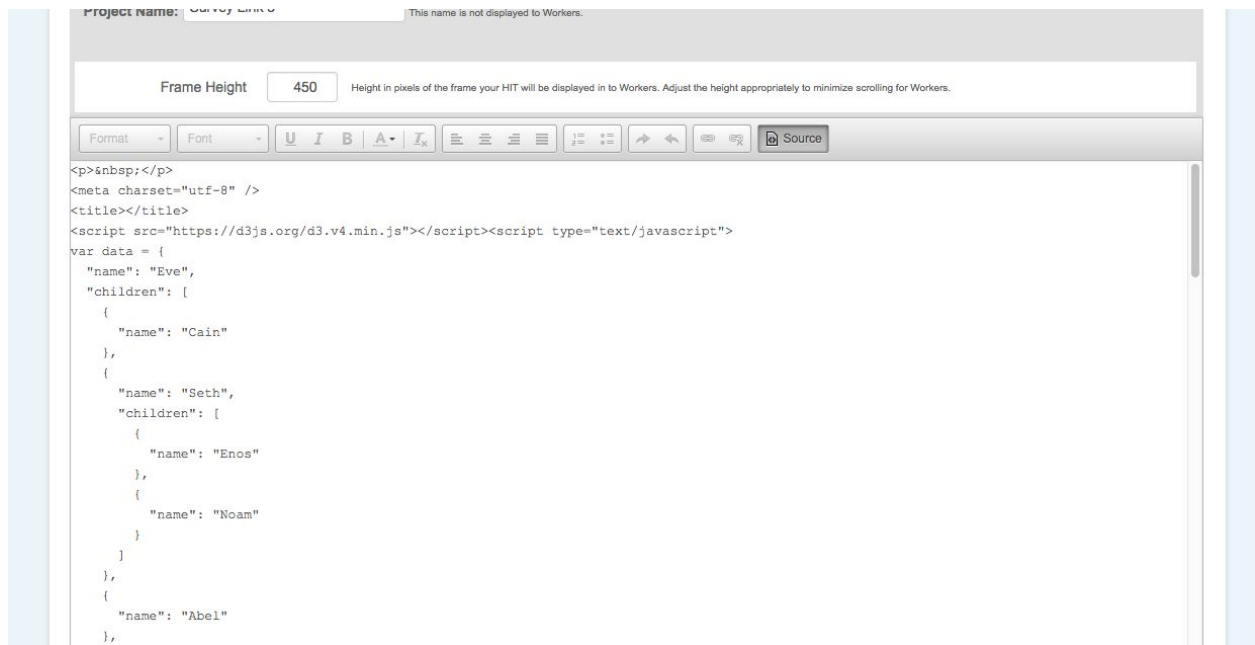

Give more detail about this task. This gives Workers a bit more information before they decide to view your HIT.

**Keywords** keywords

Provide keywords that will help Workers search for your HITs.

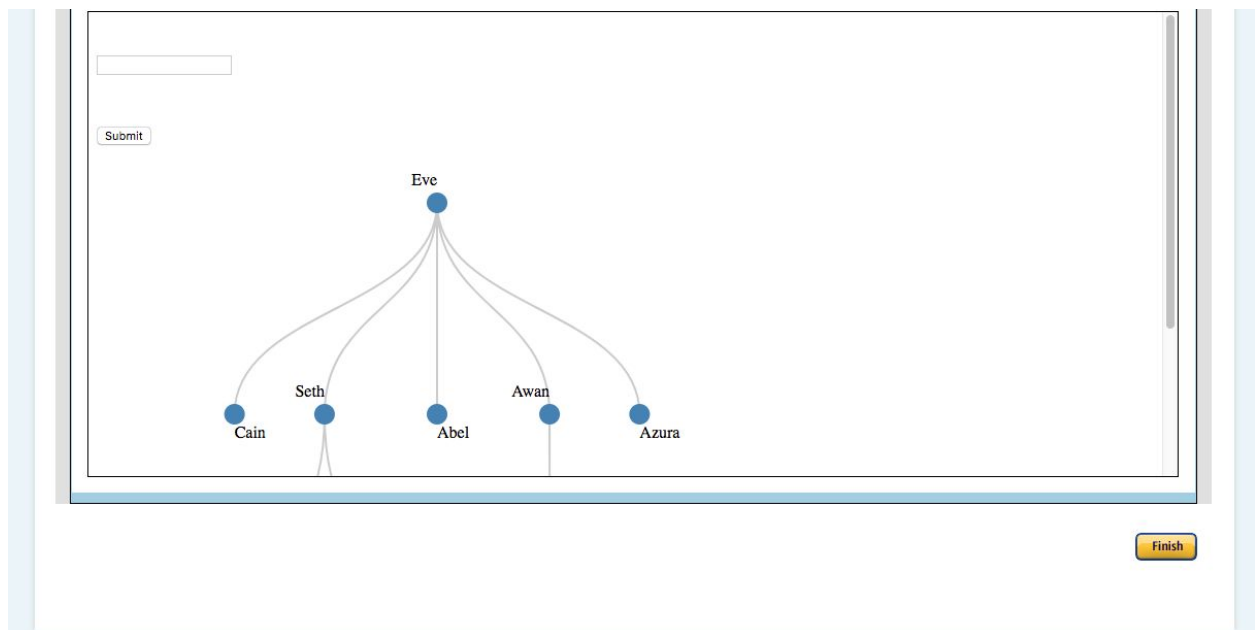

Enter all the properties and then click on design layout

Now again click on source and click preview

Now you will see the d3 output like shown below

And then click on finish .
